

ABSTRACT

Methods and apparatus for distributing literature. The method includes receiving signals from a client by way of a client interface device and a communication link. The signals are received by a controller which is a component of the apparatus of the instant invention. The apparatus automatically prints literature on sheets of media as selected by the client, and produces a booklet containing the selected literature. Postage for the booklet is automatically calculated by counting the number of sheets of media used in producing the booklet and multiplying this number by the estimated, or approximated, weight of each sheet.
